# How can Microbiology Testing empower operations?

**Microbiology testing** is indispensable in the pharmaceutical industry to ensure the safety and quality of pharmaceutical sterile products such as injections, infusions, and ophthalmic solutions, as well as non-sterile products such as solutions, capsules, tablets, and ointments. It plays a crucial role in detecting and identifying harmful microorganisms, such as bacteria, viruses, and fungi, that may contaminate medications during production or storage. By conducting rigorous microbiological tests, pharmaceutical companies can prevent potential outbreaks, protect patients from infections, and comply with regulatory standards, guaranteeing the efficacy and integrity of their products.

**Microbiology testing** finds extensive application in the pharmaceutical industry across various stages of drug development and production. It is conducted on raw materials, active pharmaceutical ingredients (APIs), excipients, and finished products to assess the microbial load and confirm compliance with established quality standards. Additionally, microbiology testing is essential for environmental monitoring in manufacturing facilities, ensuring a sterile and contamination-free production environment. By performing microbial testing, pharmaceutical facilities can make informed decisions, implement proper controls, and provide safe and effective medications to patients worldwide.

**TM Media**, the life sciences division of Titan Biotech Ltd., stands out as a trusted partner for microbiology testing in the pharmaceutical industry. With high-quality and reliable microbiology testing products, we ensure accurate and efficient microbial identification and analysis. Our state-of-the-art testing solutions, including Dehydrated Culture Media, Ready-to-Use Culture Media, Surface Sampling Swabs, Rapid Detection Kits, and Advanced Air Samplers, enable pharmaceutical companies to streamline their testing processes, reducing turnaround times and increasing productivity.

# Safeguard Quality

In the pharmaceutical industry, maintaining a clean and sterile environment is paramount to ensuring product quality and patient safety. To achieve this, microbial testing is performed. Microorganisms can also alter the chemistry and pharmacology of drugs and other products, which breaks down the active ingredients and impacts the product's efficacy.

In a manufacturing facility, key sources of contamination are the air, equipment, surfaces, or even the person performing the activity. And to avoid these contaminations, the manufacturing facility should regularly monitor the air, equipment, surfaces, or personnel wearables.

## Microbial Limit Test

The Microbial Limit Test (MLT) is performed to assess how many and which of certain viable microorganisms are present in non-sterile products that range from raw materials to finished products.

## Media Fill

The Media Fill evaluates the aseptic assembly and operation of critical sterile equipment, qualifies and evaluates the operators' technique, and demonstrates that the environmental controls are adequate to meet the basic requirements for producing a sterile drug through aseptic processing.

## Sterility Testing

A Sterility Test is a test that critically assesses whether a sterilized pharmaceutical product is free from contaminating microorganisms. The Sterility Tests are intended to detect the presence of viable forms of microorganisms in or on the pharmacopoeial preparations.

## Environmental Monitoring

Microbiological Environmental Monitoring is a method of demonstrating the microbiological quality of a controlled environment and detecting changes in a timely manner. It involves regular monitoring of the air, equipment, surfaces, or personnel wearables in the clean room area.

## In Process Validation

Process Validation is the collection and evaluation of data from the process design stage throughout production, which establishes scientific evidence that product performance is consistent from batch-to-batch and unit-to-unit.

## Water Testing

Since pharma facilities and research laboratories use sterile tools and chemical agents in order to maintain sterility, bulk water is expected to be treated in multiple units before use. Finally, after various treatment processes, purified water and water for injection are prepared and used.

## Ready-To-Use Culture Media

Ready-to-Use Culture Media Plates for Environmental Monitoring of air, surfaces, and personnel and assurance of reproducible detection of microorganisms in most critical areas like isolators and cleanrooms in pharmaceutical industries.

**Absolute Secure**

**Absolute Traceable**

**Absolute Firm**

### Sterile Production

Absolute EM Plates are prepared with absolute quality control in sterile conditions in a fully automated plant without any manual interference. Sterility assurance level SAL  $10^5$  is maintained and checked at regular intervals.

### User-friendly Packaging

The plates are  $\gamma$ -irradiated and triple-wrapped in transparent packaging. Includes the permeable film & gamma indicator on the descriptive label. Details such as expiry date, product name, code, and batch number are printed on the edge of the plate. The user has the advantage of clarity while reading colonies on the colony counter.

### Quality Check

Each plate is manufactured with precise formulation and uniform distribution, ensuring consistent growth and accurate interpretation of microbial cultures.

### Proofs Of Compliance

Certificate of Analysis (COA), Stability Data, Instructions for Use (IFU), Transportation Study, Gamma Irradiation Certificate, Packing Integrity Test Report, and Microbial Validation.

### Variants

The Plates are available in two sizes: 90 mm for passive and active air sampling applications and 55 mm contact plates for microbiology testing of surfaces and personnel.

# Surface Sampling Swabs for Environmental Monitoring

Elevate your industry standards with our cutting-edge solution!

## Superior Sampling Precision

The Swabs are designed to collect the most accurate and representative samples, ensuring reliable environmental monitoring and regulatory compliance.

## Contamination Control

Safeguard your production environment against potential contaminants. The Swabs are manufactured under stringent quality standards to minimize the risk of cross-contamination.

## User-Friendly Design

Ergonomically designed swab handles and easy-to-use instructions make sampling a breeze, reducing the chances of errors and ensuring consistent results.

## Enhanced Detection

With these quality Swabs, you can detect even trace amounts of contaminants, allowing for swift corrective actions and preventing potential product recalls.

## Versatility

Whether you need to sample flat surfaces, intricate equipment, or hard-to-reach corners, these Swabs are engineered for adaptability.

## Global Compliance

Comply with international regulatory standards effortlessly. These Swabs are designed to meet the rigorous requirements of the pharmaceutical industry.

## TME 006 | Infrared Sterilizer for Inoculation Loops NEW

- Most advanced technology with intelligent temperature controller.
- Accurate, reliable and quick sterilization.
- Stainless steel body is safe to use and easy to clean.
- Long life and graceful instrument with zero pollution emittance.

Display	LED
Time range	0-999 min
Power	150W
Maximum temperature in the central area	825°C±50°C
Maximum disinfection outer diameter	Φ15 mm
Workspace length	165 mm
Heating up time	15 min
Power supply	220V 50 HZ
Ambient temperature	5-40°C
Size	170x105x1800 mm
Net weight	1.1 kg

## TME 003 | Microbial Air Monitoring System (Air Sampler)

- Validated as per BS EN ISO 14698-Part I.
- Unique structure avoids re-circulation of air.
- Inbuilt adaptors for 90 mm plates & 55 mm plates.
- Customize air volume as per requirement.

Nominal Air Flow Rate	100 litres of air per minute
Impact Speed	< 20m/sec
Air Sample Volume	10-9999 liters can be selected and stored in the instrument. Three different volumes can be set
Recommended volume of air per cycle	1000 litres
Plate Size	90 mm & 55 mm
Weight of instrument	2.68 kg
Construction	High quality aviation aluminum
Display	High Brightness LCD display
Battery Pack	Rechargeable Li Ion (without memory effect). Battery Charging takes only 4 hours. After charging, the battery will work up to 8 hours.

# Microbiological Lab Equipments

## TME 005 | Microbial Air Monitoring System (Air Sampler)

The equipment uses isokinetic sampling, which delivers uniform airflow across the surface of an agar plate at high velocity for quick analysis. A specified volume of air is passed through small holes or slits onto a petri plate containing culture medium for a specified period of time. After the cycle is complete, the plate is removed from the air sampler and incubated, and visible colonies are counted to determine the level of contamination. This will result in the number of viable microorganisms present in each liter of air in the area being calculated.

### Features

Easy-to-Use

Lightweight and portable

Unidirectional airflow

Suitable for 90 mm plates

Easily export and print data

Individual user credentials

Can store up to 10,000 entry logs

3-level authority management

Validated as per BS EN ISO 14698-Part 1

Easily customize sample air volumes or choose from pre-sets.

PC connectivity to meet 21CFR : Part 11 requirements
