

## TM 575 - YEAST GLUCOSE BEEF BROTH

### INTENDED USE

For cultivation of lactic Streptococci for determining growth characteristics.

### PRODUCT SUMMARY AND EXPLANATION

The Lactic Acid Bacteria (LAB) comprise a clad of gram positive low-GC, acid tolerant, non-sporulating, non-respiring rod or cocci that are associated by their common metabolic and physiological characteristics. These bacteria produce lactic acid as the major metabolic endproduct of carbohydrate fermentation. The industrial importance of the LAB is evidenced by their generally regarded safe (GRAS) status, due to their ubiquitous appearance in food and their contribution to the healthy microflora of human mucosal surfaces. The genera that comprise the LAB are at its core *Lactobacillus*, *Leuconostoc*, *Pediococcus*, *Lactococcus* and *Streptococcus* as well as the more peripheral *Aerococcus*, *Carnobacterium*, *Enterococcus*, *Oenococcus*, *Teragenococcus*, *Vagococcus* and *Weisella*.

Lactococci (formerly Lancefield group N streptococci) are used extensively as starter inoculate in dairy fermentations, with humans estimated to consume 1018 lactococci annually. Partly due to their industrial relevance, both *Lactococcus lactis* subspecies (*lactis* and *cremoris*) are widely used as generic LAB models for research. Yeast Glucose Beef Broth is used for the cultivation of actic Streptococci.

### COMPOSITION

| Ingredients                    | Gms / Ltr |
|--------------------------------|-----------|
| Peptic digest of animal tissue | 10.000    |
| Beef extract                   | 10.000    |
| Yeast extract                  | 3.000     |
| Sodium chloride                | 5.000     |
| Dextrose                       | 5.000     |

### PRINCIPLE

Dextrose provides an energy source for the growth of microorganisms. Yeast extract, peptic digest of animal tissue and beef extract provide the necessary growth factors and nutrients. Sodium chloride helps to maintain osmotic balance of the cells.

### INSTRUCTION FOR USE

- Dissolve 33 grams in 1000 ml distilled water.
- Heat if necessary to dissolve the medium completely and dispense as desired.
- Sterilize by autoclaving at 15 psi pressure (121°C) for 15 minutes.

### QUALITY CONTROL SPECIFICATIONS

|                               |   |
|-------------------------------|---|
| Appearance of Powder          | : Cream to yellow homogeneous free flowing powder.                      |
| Appearance of prepared medium | : Light amber coloured clear solution without any precipitate in tubes. |
| pH (at 25°C)                  | : 7.0±0.2   |

### INTERPRETATION

Cultural characteristics observed after an incubation.

| Microorganism                     | ATCC  | Inoculum (CFU/ml) | Growth         | Incubation Temperature | Incubation Period |
|-----------------------------------|-------|-------------------|----------------|------------------------|-------------------|
| <i>Streptococcus cremoris</i>     | 19257 | 50-100            | Good-luxuriant | 35 - 37°C              | 18-24 Hours       |
| <i>Lactobacillus lactis</i>       | 8000  | 50-100            | Good-luxuriant | 35 - 37°C              | 18-24 Hours       |
| <i>Streptococcus thermophilus</i> | 14485 | 50-100            | Good-luxuriant | 35 - 37°C              | 18-24 Hours       |

**PACKAGING:**

In pack size of 500 gm bottles.

**STORAGE**

Dehydrated powder, hygroscopic in nature, store in a dry place, in tightly-sealed containers between 25-30°C and protect from direct sunlight. Under optimal conditions, the medium has a shelf life of 4 years. When the container is opened for the first time, note the time and date on the label space provided on the container. After the desired amount of medium has been taken out replace the cap tightly to protect from hydration.

**Product Deterioration:** Do not use if they show evidence of microbial contamination, discoloration, drying or any other signs of deterioration.

**DISPOSAL**

After use, prepared plates, specimen/sample containers and other contaminated materials must be sterilized before discarding.
