

TM 838 – R-3A AGAR

INTENDED USE

For sub culturing of microorganisms recovered on less nutritive R-2A Agar from potable water.

PRODUCT SUMMARY AND EXPLANATION

R-3A Agar is slightly more nutritious than R-2A Agar and is used for sub culturing the isolates obtained on the less nutritive R-2A Agar.

R-2A Agar is recommended by APHA for estimating the heterotrophic plate count by the pour plate, spread plate or membrane filter procedure. R-2A Agar is formulated as per Reasoner and Geldreich. Stressed or injured organisms during water treatment are unable to grow on high nutrient media, since the faster growing organisms outgrow the former. Therefore, the use of a low nutrient medium like R-2A Agar incubated for longer incubation periods allows these stressed organisms to grow well.

COMPOSITION

Ingredients	Gms / Ltr
Casein Acid Hydrolysate	1.000
Yeast extract	1.000
Biopeptone	1.000
Dextrose	1.000
Starch soluble	1.000
Dipotassium phosphate	0.600
Magnesium sulphate	0.048
Sodium pyruvate	0.600
Agar	15.000

PRINCIPLE

This medium consists of Biopeptone, casein acid hydrolysate and yeast extract which provide nitrogen, vitamins, amino acids, carbon and minerals. Dextrose serves as an energy source. Soluble starch aids in the recovery of injured organisms by absorbing toxic metabolic byproducts while sodium pyruvate increases the recovery of stressed cells. Magnesium sulphate is a source of divalent cations and sulphate. Dipotassium phosphate is used to balance the pH of the medium.

INSTRUCTION FOR USE

- Dissolve 21.25 grams in 1000 ml distilled water.
- Heat to boiling to dissolve the medium completely.
- Sterilize by autoclaving at 15 psi pressure (121°C) for 15 min. DO NOT OVERHEAT.
- Mix well and pour into sterile Petri plates.

QUALITY CONTROL SPECIFICATIONS

Appearance of Powder : Cream to yellow homogeneous free flowing powder.
Appearance of prepared medium : Light yellow coloured clear to slightly opalescent gel forms in Petri plates.
pH (at 25°C) : 7.2 ± 0.2

INTERPRETATION

Cultural characteristics observed after incubation. (In case of water samples from fields it is suggested to incubate further for upto 7 days to ascertain the absence of organisms).

Microorganism	ATCC	Inoculum (CFU/ml)	Growth	Recovery	Incubation Temperature	Incubation Period
<i>Candida albicans</i>	10231	10-100	Good-luxuriant	>=50%	35-37°C	24-72 Hours
<i>Escherichia coli</i>	25922	50-100	Good-luxuriant	>=50%	35-37°C	24-72 Hours
<i>Salmonella</i> Enteritidis	13076	50-100	Good-luxuriant	>=50%	35-37°C	24-72 Hours
<i>Enterococcus faecalis</i>	29212	50-100	Good-luxuriant	>=50%	35-37°C	24-72 Hours
<i>Salmonella</i> Typhi	6539	50-100	Good-luxuriant	>=50%	35-37°C	24-72 Hours

PACKAGING:

In pack size of 500 gm bottles.

STORAGE

Dehydrated powder, hygroscopic in nature, store in a dry place, in tightly-sealed containers between 25-30°C and protect from direct sunlight. Under optimal conditions, the medium has a shelf life of 4 years. When the container is opened for the first time, note the time and date on the label space provided on the container. After the desired amount of medium has been taken out replace the cap tightly to protect from hydration.

Product Deterioration: Do not use if they show evidence of microbial contamination, discoloration, drying or any other signs of deterioration.

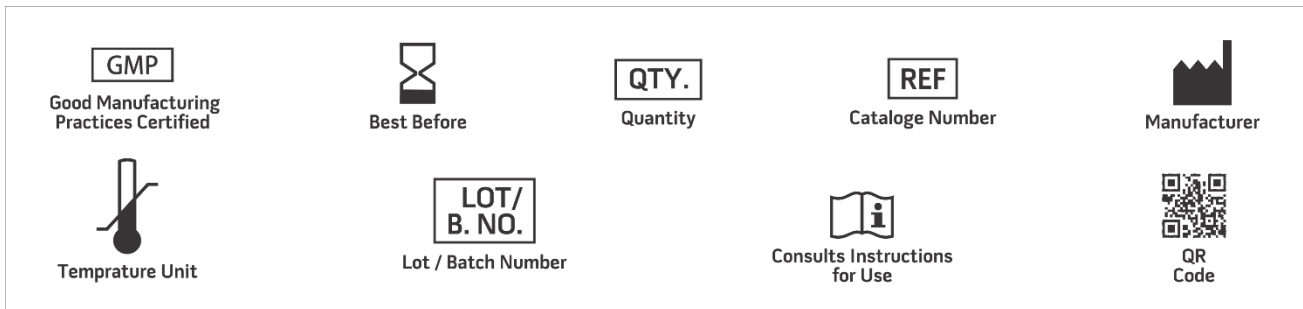

DISPOSAL

After use, prepared plates, specimen/sample containers and other contaminated materials must be sterilized before discarding.
